REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets if necessary or use APHIS Form 7023A)

A. Animals Covered By The Animal Welfare Regulations	B. Number of animal being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	C. Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	D. Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals an for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.	E. Number of animals upon which teaching, experiments, research, surgery or tests were conducted involving accompanying pain or distress to the animals and for wh the use of appropriate anesthetic, analgesic, or tranquiliz drugs would have adversely affected the procedures, res or interpretation of the teaching, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress in these animals and the reas such drugs were not used must be attached to this report	F. TOTAL NUMBER OF ANIMALS (COLUMNS C + D + E)
4. Dogs		53	5	24	82
5. Cats					
6. Guinea Pigs					
7. Hamsters		42			42
8. Rabbits		50	106	14	170
9. Non-human Primates		69	19	12	100
10. Sheep					
11. Pigs					
12. Other Farm Animals					
13. Other Animals					
Cotton Rat			158		158
Ferrets			72		72

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual rese teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and ap Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary inc brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

Attachment to Annual Report of Research Facility (APHIS Form 7023)

Explanation for animals classified under Item E of APHIS Form 7023:

There were 24 dogs, 14 rabbits, and 12 non-human primates noted in the "pain and distress without treatment" category because they were administered test articles that caused pain or distress, or interfered with normal functions because of their composition. All of these animals were involved in safety assessment toxicology studies for novel pharmaceutical candidate compounds. These animals variably experienced episodes of shock, emesis, diarrhea, lethargy, transient CNS depression, local skin irritation, and/or reduced appetite associated with administration of the test article. The reason for withholding tranquilizers, analgesics, anesthetics or other metabolically active therapeutic agents was that their use would have confounded the meaningful interpretation of both pharmacokinetic and drug-induced toxicity data. Prior to approval of the use of a drug or biological agent in humans, the U.S. Food and Drug Administration (FDA) requires submission of pharmacokinetic and drug-induced toxicity data derived from both rodent and non-rodent mammalian species (Reference: 21 CFR, Part 312, 4-1-95) and provides guidance regarding the appropriate design of safety assessment toxicology studies via the "Red Book II".

Column E Explanation

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: **64-R-0005**
2. Number of animals used in this study. **12**
3. Species (common name) of animals used in the study. **Sheep (2002-0102)**
4. Explain the procedure producing pain and/or distress.

The investigator is studying peptides that may stimulate appetite. Endotoxins are administered to sheep to establish a model of an animal having a reduced appetite.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see Item 6 below)

Treatment for symptoms of endotoxin exposure will interfere with the effects of endotoxin on appetite. Endotoxin is administered for a maximum of 72 hours via a subcutaneous osmotic minipump. After 72 hours, the pumps are removed and the sheep are administered an anti-inflammatory agent (banamine). In the extensive experience of the investigator, the sequelae of the endotoxin administration are mild fever which is dropping by 24 hours post-exposure and a mild depression in appetite for 2-3 days. However, if the body temperature exceeds 106 F (high end of normal = 103.5 F) or if an animal does not respond to a person entering the room, is unable to stand, or won't respond to sound or motion, the animal will be immediately removed from the study and clinical intervention initiated in advance of the 72 hour experimental endpoint. Otherwise, sheep receive an injection of banamine 72 hours after the administration of the endotoxin. Sheep are monitored closely (at time points of 2, 4, 6, 12, 24, 48, 72, and 96 hours) subsequent to the administration of the endotoxin.

6. What, if any, federal regulations require this procedure? Cite the agency, the code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9, CFR 113.102).

N/A

Column E Explanation

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: **64-R-0005**
2. Number of animals used in this study. **20**
3. Species (common name) of animals used in the study. **Cattle (2003-0603)**
4. Explain the procedure producing pain and/or distress.

The investigator is studying the mechanism of action whereby estrogen/progesterone implants improve an animal's response to endotoxemia. Endotoxins are administered to calves to establish the endotoxic condition.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see Item 6 below)

Treatment for symptoms of endotoxin exposure will interfere with the assessment of the beneficial effects of the hormone implant as it relates to the endotoxin exposure. Endotoxin is administered as a bolus dose via intravenous injection. In the experience of the investigator, this protocol involves a nonlethal dose of endotoxin and the lot number employed has been used at this dose without significant problems. The investigator states that the endotoxin effect on fever is beginning to decline by 6 hours post-exposure. However, if the body temperature exceeds 106 F (high end of normal for a calf = 103 F), the animal will be immediately removed from the study and clinical intervention initiated in advance of the 6 hour experimental endpoint. Otherwise, calves receive an injection of banamine 6 hours after the administration of the endotoxin. Calves are monitored closely (at time points of 0, 2, 4, 6, and 24 hours) subsequent to the administration of the endotoxin.

6. What, if any, federal regulations require this procedure? Cite the agency, the code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9, CFR 113.102).
